

Mohammad Amin Nazeri

Backend Developer (.NET)

Email: nazrymhmdamyn85@gmail.com

DoB: 2008-04-18

Mobile: (+98)9913181090

Military Service: Educational Exemption

Address: Kashan, Isfahan, Iran

Profile Summary

Experienced Backend Developer with hands-on experience in real-world projects, specializing in ASP.NET Core and DDD, Clean Architecture, and CQRS patterns. I have worked at two software companies and have designed and implemented several systems including an online learning platform, a hotel reservation system, and a marketplace.

Education

Undergraduate in Network and Software

Institute/School: Shahid Beheshti Technical School Kashan,
Isfahan, Iran

October 2023 - June 2026

Work Experience

.NET Developer

Arian Software team
Kashan, Isfahan, Iran
November 2025 - Present

Tasks and Achievements

Designed and implemented the Backend of a hotel reservation system using ASP.NET Core Web API based on Clean Architecture, DDD, and CQRS.

Implemented Redis caching, which significantly reduced repetitive database request load.

Managed multiple databases simultaneously (SQL Server and MongoDB) using a Multi-Database Architecture approach.

Containerized the project with Docker and wrote unit tests with xUnit to increase system stability.

Implemented centralized Logging, Monitoring, and error handling to improve maintainability.

.Net Developer

Sepidar Danesh (Atrisa Comprehensive Financial Systems)
Kashan, Isfahan, Iran
July 2025 - December 2025

Tasks and Achievements

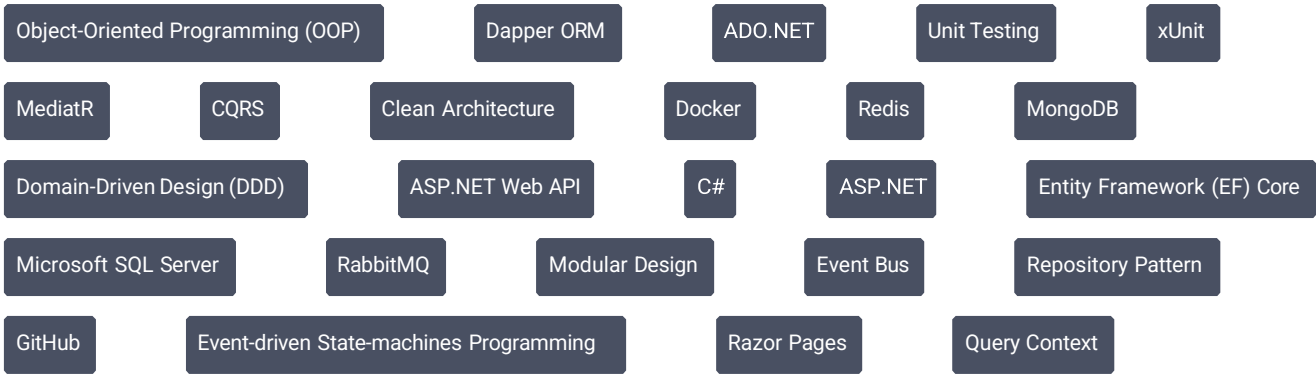

Designed and developed financial and accounting systems using ASP.NET MVC with a focus on stability, code readability, and maintainability.

Implemented the data access layer with Entity Framework Core and designed database structures for financial projects.

Developed a website builder platform with user and content management panel (CRM) using ASP.NET MVC and SQL Server.

Participated in requirements analysis within a multi-member team and implemented software solutions.

Skills

Projects

DevLearn Online Learning Platform – Modular Monolith Architecture

March 2026

An online learning platform built with Modular Monolith architecture consisting of 6 independent modules (Course, User, Blog, Ticket, Comments, Transaction) based on ASP.NET Core. Inter-module communication is managed via Event Bus, and complete separation of Domain, Application, and Infrastructure layers has been achieved using DDD, CQRS, and Facade Pattern.

Hotel Management and Reservation System

For: Arian Software team

November 2025

Designed and implemented a RESTful API based on Clean Architecture with DDD and CQRS patterns for full hotel reservation process management.

Used MediatR for request handling and responsibility separation in the Application layer. Implemented

Redis caching, which improved system performance and reduced database load. Managed multiple

databases simultaneously with Multi-Database Architecture and data integration. Implemented a

software license management and validation system.

Containerized the project with Docker and implemented unit tests with xUnit.

Online Store (Marketplace)

September 2025

Designed and developed an Enterprise-level Marketplace with ASP.NET Core based on Clean Architecture, DDD, and CQRS.

Implemented the data layer with EF Core and Dapper, optimized performance with Redis Caching, developed an admin panel with

Razor Pages, and fully containerized the project with Docker.

Website Builder Platform with Admin and User Panel (CRM)

For: Sepidar Danesh

November 2025

Designed and developed a site management system using ASP.NET MVC and SQL Server, including a user and content

management panel with the ability for end users to create and manage websites. Focus on clean structure, security, and system scalability.

Fratak Translator – Mobile Application

January 2025

Developed a translation mobile application for Android and iOS using .NET MAUI. Connected to translation APIs with a simple and fast UI design, focused on user experience and appropriate performance.

Link: <https://github.com/Mohammad-Amin-Nazeri/TransletaApp-Maui>

TecnoBlog Website

November 2024

Developed a content website with ASP.NET, C#, and SQL Server with a stable and scalable structure for content management.
